

# Boost your company's cybersecurity with ease

NordPass is an advanced yet easy-to-use password manager developed by the team behind NordVPN.

It empowers today's organizations to protect their sensitive information effectively by giving them full control over who can access — and share access to — company resources.

NordPass also serves as a cybersecurity monitoring tool that informs businesses about data breaches and password vulnerabilities so they can mitigate such risks before they escalate.

“It saves time and allows us to focus on our daily operations. For any business looking for a way to securely manage passwords in a user-friendly way, NordPass is a necessary tool.

– Philippe Hannes,  
Infrastructure and Data Protection Officer

# Discover how NordPass meets your cybersecurity needs

## Ensuring the safety of company data while enabling fast access

- Unlimited encrypted storage for passwords, passkeys, notes, and payment information
- The zero-knowledge architecture ensures that access to data remains exclusively private
- Ultra-secure XChaCha20 encryption algorithm that protects data from unauthorized access
- The autofill feature allows one-click logins, quick payments, and fast form completion

## Being able to share of company credentials securely

- Secure sharing of credentials, credit card details, and notes with individuals and groups
- Customizable sharing permissions for providing specific employees with different access rights
- Encrypted folders for sharing multiple items at the same time

## Facilitating compliance with robust security protocols

- Company-wide settings for enforcing sound password policies, enabling auto-lock on devices with public access, disabling outside sharing, and more
- Multi-factor authentication for enhanced user identity verification
- A built-in authenticator for adding two-factor authentication (2FA) to business accounts stored in NordPass
- Password Generator for creating unique and complex passwords that are in line with company policy

## Monitoring the company's security and preventing data leaks

- Data Breach Scanner monitors the web for compromised payment information, emails, and company domains
- Activity Log provides insights into account activity, item sharing, changes to company settings, and more
- Password Health identifies weak, old, and re-used passwords in the organization
- Public API allows real-time capture of end-user actions for monitoring and alerting

## Integrating the password manager into the existing IT infrastructure

- Seamless integration with Google Workspace, Entra ID, MS ADFS, and Okta
- Synchronization across Windows, macOS, iOS, Android, and Linux devices

## Centralizing access management

- Streamlined on – and offboarding with simplified user controls for granting and revoking access
- Effortless transfer of access permissions among team members
